Traxonetec is a solutions company. We are happy to provide whatever information and documentation is needed to clarify the system design and deepen understanding of our products. Please know, however, that our expertise is limited to our products only. Traxonetec and its employees cannot be held responsible for decisions relating to future layout, lighting design, or other design elements that are not part of our products. Traxonetec is not responsible for the design of the system, the design of the building, or the design of the system's integration with other systems. On that same note, we will make every effort to ensure that a system is installed and working properly. To that end, a system commissioning service may be listed on our quotation. As part of the system commissioning service, Traxonetec will provide a detailed report of the system's performance, including a list of any deficiencies and a plan of action to correct them. Declining the system commissioning service absolves Traxonetec of any and all responsibility for the functioning of the installed system beyond the standard product warranty. It is the responsibility of the installing contractor to install, measure and control equipment in the field and coordinate and to make all wire terminations. The installing contractor also responsible for the design of the system and the design of the building. Traxonetec is not responsible for content (e.g. selection of lighting, safety devices, etc.) that is not part of our products. Traxonetec is not responsible for the design of the system or the design of the building. Traxonetec is happy to support your team in every way we can, and we look forward to a beautiful and successful installation.
