AN OSRAM BUSINESS

Enterprise-wide information systems are needed to clarify the system design and deepen understanding of our products, processes, and customers. We are currently working on a number of projects to improve our information systems. These projects include: (1) developing a new information system to support our sales and marketing efforts; (2) developing a new information system to support our manufacturing operations; (3) developing a new information system to support our financial reporting; and (4) developing a new information system to support our human resources management. We are also working on a number of other projects to improve our information systems, including: (1) developing a new information system to support our customer service efforts; (2) developing a new information system to support our product development efforts; (3) developing a new information system to support our research and development efforts; and (4) developing a new information system to support our general management efforts. We are confident that these projects will result in significant improvements in our information systems and, consequently, in our overall performance.
